The Case Against Fluoride by Dr. Paul Connet tells us that the fluoride going into the drinking water of more than 180 million people each day is not even pharmaceutical grade, but rather a hazardous waste product of the phosphate fertilizer industry.

Hydrofluorosilic acid is an industrial-grade, unpurified and corrosive form of fluoride, and yet, despite the increasing evidence of its negative effects on human health, the American Dental Association and the Center for Disease Control continue to promote and mandate water fluoridation.
